

DX3000/DX5000 Appliances

Innovative Disk-Based Backup

Quantum DX3000 and DX5000 disk-based backup appliances take the innovative features of Quantum's pioneering large scale Virtual Tape Libraries and extend the benefits to small and medium enterprises. With self-contained, easily implemented models spanning from 1.5TB to 9TB of protected data (before compression) they are optimized for performance. Quantum Optyon™, the industry's first hardware compression engine, makes these appliances the ideal choice when rapid and reliable recovery is required. The DX3000 offers compact, fast backup with secure remote management and monitoring in capacity points that make it perfect for a remote or branch office. The DX5000 offers enterprise class features in a high density package with the same remote capabilities and throughputs in excess of 1TB/hr. The flexibility of the DX appliances extends to choice of interface between Fibre Channel SAN or iSCSI over GbE to even presenting portions as a raw disk volume for miscellaneous storage. The possibility of downtime is lessened with Quantum's StorageCare™ Guardian offering real time monitoring and next day support within the standard warranty. Enjoy faster backup, very high speed file restores and maximum reliability with Quantum DX.

**DX3000 COMPRESSED CAPACITY
UP TO 6.0TB**

**DX5000 COMPRESSED CAPACITY
UP TO 18.0TB**

FEATURES AND BENEFITS

-  Purpose-built for Simplicity - The design makes deployment straightforward and fast
-  Unique Optyon™ hardware based on 2:1 data compression - Double your capacity or more with no performance penalty
-  Emulates up to 32 (DX3000 or 64 Tape Drives (DX5000) - Run a large number of backup jobs concurrently
-  Common architecture across the DX-Series
-  Supports up to 16 partition - Each partition can be configured as a Virtual Tape Library or a Disk Volume
-  StorageCare Guardian at No Extra Cost - Enables Quantum to proactively monitor the health of your device over the Internet
