

Highlights:

Workflow Automation tools help streamline large scale operations

Intuitive GUI-Interface for Workflows simplifies management

Extensive list of pre-defined workflows accelerates service delivery

Advanced policy-based automation accelerates tasks, reduces risks and enhances orchestration

CommVault® Simpana® 10 Automated Management

Automated Data Management Designed to Streamline Operations

Data may continue to grow at exorbitant rates, but there is no commensurate growth in headcount to manage all that data, or the infrastructure to support it. The days of throwing more resources or more IT staff at the problem are long gone. In the modern IT organization of 24 by 7 operations and shared services infrastructures, automation and orchestration is more important than ever.

Workflow Automation

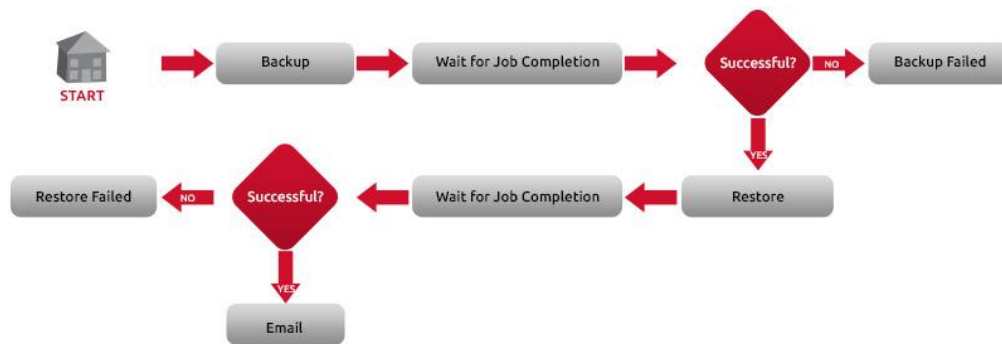

Workflow capabilities in Simpana 10 software let you automate repetitive or highly complex data management tasks. Admins may select from an extensive catalog of typical tasks (such as "Register New Clients"), or create their own custom workflows using an intuitive graphical user interface. Using these advanced tools, admins may automate business tasks by bringing together sets of individual tasks in a specific order or decision tree.

Fully automate runbooks or replace hours of scripting tasks with a workflow by dragging and dropping the activities that will define your business process.

The workflow engine provides a library with all the basic tasks needed to design a workflow. If a particular task is not available in the library, you can create your own tasks, which can be web services developed by you or other businesses.

Easily manage, monitor and troubleshoot workflows from the CommVault Simpana console GUI, simplifying management to a single pane of glass.

Leverage fully executable CLI and XML scripts for fast, simple portability and integration into other 3rd Party software applications.

Advanced Policy-Based Automation

The policy-based approach embedded natively in every Simpana software data management task helps deliver streamlined management and optimized resource utilization.

Automated Storage Tiering

Optimize data retention, data access and cost considerations by implementing automated storage tiering that ensures high value data is available for rapid access while archive and compliance data is retained in cost effective secondary storage pools.

Virtual Machine Auto Protection

Manage virtual machine sprawl with fully custom options for auto-discovery and protection of virtual machines.

Automatic System Registration

During initial setup, client laptops/desktops "call home" to centralized IT for remote configuration.

KEY CAPABILITIES AND BENEFITS

Workflow Automation tools Streamline management of large scale operations

Intuitive GUI-Interface for Workflows Simplify management

Extensive list of pre-defined workflows Accelerate deployments

Automatic System Registration During initial setup, client laptops/desktops “call home” to centralized IT for remote configuration.

Automated Storage Tiering Optimize data retention, data access and cost considerations by implementing automated storage tiering that ensures high value data is available for rapid access while archive and compliance data is retained in cost effective secondary storage pools.

Virtual Machine AutoProtection Manage virtual machine sprawl with fully custom options for auto-discovery and protection of virtual machines.
