CommVault Simpana® Enterprise Search

Transform Your Business with Anytime, Anywhere Access

From a single platform, CommVault® Simpana® software improves workforce productivity with anytime, anywhere search and access, from any device, instantly and securely. With data located in multiple repositories, organizations today struggle to find information when they need it. Simpana ContentStore, the hardware-agnostic, secure, virtual repository where all backup and archive data is maintained, removes those barriers. With powerful and scalable content indexing, millions of items within the ContentStore can searched in seconds to produce relevant, accurate search results.

Workforce productivity is accelerated with a wide range of simple and intuitive self-service capabilities for end-users, legal and compliance teams. Empowering users with self-service search and retrieval across the enterprise enables substantially reduced cost and risk to the enterprise.
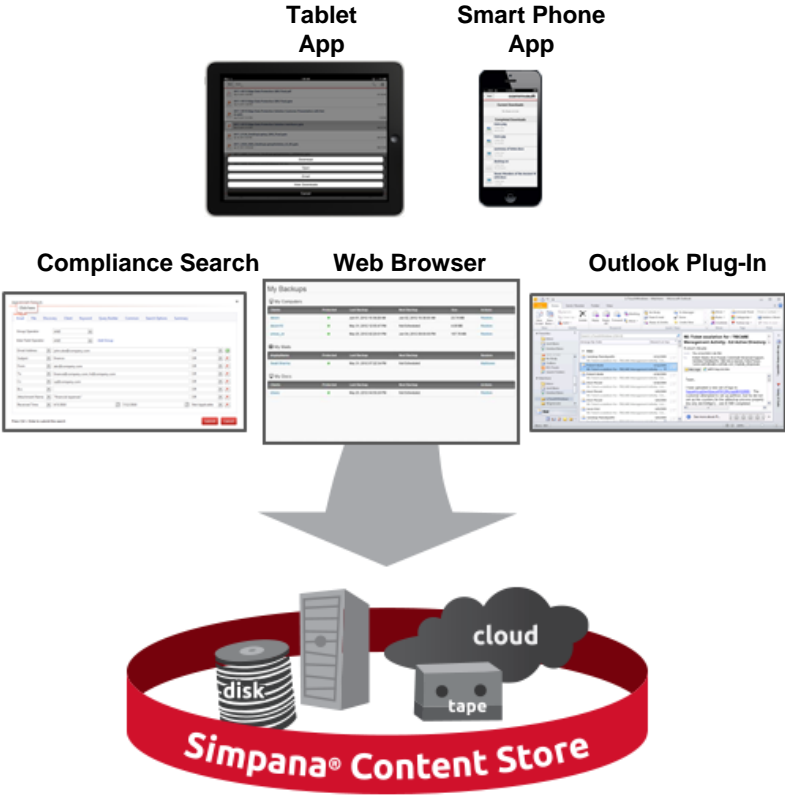

The following features combine to enable higher levels of business productivity and competitiveness:

- All Simpana managed data is kept in the ContentStore for efficiency, flexibility and rapid access. As a hardware agnostic and deduplicated virtual repository, ContentStore consolidates protection and archive data to eliminate inefficient data silos that need to be searched when the clock is ticking.
- Scale-out content indexing architecture adds virtual search nodes as data grows over time, optimizing costs. Indexing and searching large volumes of data is instant and is easy to manage.
- Increase workforce productivity with self-service search and previews to files, emails and email attachments with Simpana ContentStore from within Microsoft Outlook or a web browser.
- Reduce helpdesk costs by empowering end-users with self-service search and access to their backup and archive data.

Legal and Compliance Benefits
- Role-based information access and review enables secure, multi-channel collaboration and decision making. Search results, common classification schemas and information collections are intuitively shared amongst peers and related information stakeholders across the enterprise.
- Enable a proactive and legally defensible information management strategy and search workflow from a common interface.
- Provide complete 360 degree insight into information, the number of copies, relevancy, ownership, classification and above all, access, view and retrieval.
- Accelerate large-volume discovery searches and enable secure legal hold with a centralized archive of all Electronically Stored Information (ESI) including email, file, SharePoint and backup data.
- Simplify and accelerate the review process by removing more extraneous data earlier in the process, saving on outsourced costs
- Auditable chain of custody is preserved throughout the information lifecycle ensuring complete fidelity to support compliance regulations.
- Simple & Advanced Search options means administrators can search the characteristics of the information itself, including frequently used keywords and phrases, distributions of content across date ranges and use of files by type, size or tags. Result sets can be further refined as a matter unfolds.

Boost Productivity Across the Enterprise Leveraging the Simpana® ContentStore

Tablet App

Smart Phone App

Compliance Search

Web Browser

Outlook Plug-In

KEY CAPABILITIES AND BENEFITS

ContentStore	Accessible via a single console, automated policies manage data in the Simpana ContentStore – the efficient, virtual repository that provides a flexible and efficient way to store, access and understand your data.
ContentStore Mail	Improves productivity with self-service search and previews of archived email using a native, Microsoft Outlook plug-in
Self-Service Web Console	View and restore protected data from virtually anywhere and any device, including plug-ins for direct access from Outlook, vCenter and Windows Explorer and through mobile apps and a web console.
Compliance Search	Content based search and legal holds for email, file, web, instant communication & document management systems. Result sets can be easily refined, shared and exported to third-parties via industry standard formats.
Secure Multi-Tenant	CommCell or Active Directory integrated user management to support multi-tenant access and views.
Healthcare Image Search	Rapidly search and retrieve PACs, DICOM and healthcare images stored in the ContentStore without requiring third-party applications.
Support for Edge Devices	Increase workforce productivity by providing end-users with self-service access with HTML previews to emails and files from any tablet or device.
Professional Services	Augment staff, train your team, or simply find solutions to unexpected problems. CommVault works closely with customers and partner to enable right size/right cost options that enable Simpana solutions and minimize Time to Value.
