

All Media is Not Created Equal!

Spectra Certified Media is Vastly Superior

Our commitment to you is making tape pain-free through Spectra Certified Media. From manufacturer selection to testing and customer shipment, every step of the Spectra Certified Media process is designed to ensure you have the most reliable and automated tape storage available. No other supplier places as much emphasis on continual enhancements and features that simplify all aspects of the media management process.

Only use the best media.

Media quality is at the core of efficient, pain-free backup and archive. All manufactured tape is not the same, leaving your data to chance with suspect media. Only the highest quality media available on market becomes Spectra Certified Media. This ensures you have the most reliable and worry-free data protection possible.

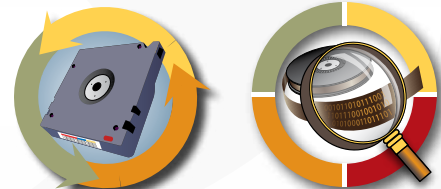

Run at Peak Performance.

Spectra Certified LTO Media with CarbideClean® ensures your media is debris-free, allowing your system to run at peak performance. CarbideClean is a unique Spectra enhancement that extends the life of your tape drives and enhances the performance and capacity of your tapes.

Track Spectra tapes throughout their life.

With Spectra Certified Media, you'll never get caught by surprise again. Only with Spectra T-Series libraries, Certified Media combined with Media Lifecycle Management (MLM) reduces the most common media-related failures. MLM allows you to proactively manage your tape inventory through simple monitoring of over 40 health statistics and automatically identifies at-risk tapes ready for retirement.

Certified Media assures data integrity using an integrated, intelligent and comprehensive set of Data Integrity Verification (DIV) tools when integrated with Spectra T-Series libraries. PreScan verifies your tapes are safe prior to usage and QuickScan and PostScan verify your data has been properly written to tape.

Hassle-Free.

Spectra Certified Media arrives on your doorstep; each tape unwrapped with pre-applied barcode labels and bundled in TeraPack containers ready for bulk-loading into your Spectra T-Series library. When it's time to export them from the library, the TeraPacks can be covered and protected as they are stored onsite or offsite.

With Spectra Certified Media you order it any way you want it. A myriad of choices allow you to specify the exact number of tapes you require with no minimum order, custom or predefined barcode sequences, TeraPacks with or without dust covers or no TeraPack at all. The choice is yours.

Certified Media is warranted for life.

We've got you covered. Spectra's Certified Media Lifetime Guarantee warrants your Spectra tapes to be free from defects in materials and workmanship for the life of the media. We'll exchange any defective tape free of charge.
